Industry Expertise

Experts with vast domain knowledge across various verticals and sound technical knowledge have been a key to our success at various customer engagements across the globe. Our experts provide strategic solutions to customers involved in the following verticals,

LGS Offerings

Application Development and Maintenance Services

LGS fosters rapid, component based agile development approach to build mission critical applications for its customers. Over a period of time, we have gained expertise in various world class methodologies for application development maintenance, upgrade, support and delivered cost benefit services to our esteemed clientele across the globe.

LGS also offers a wide range of product development services such as Product Re- Engineering, Architecture & Design, Development, Product Testing including release & product management services

Open Source Technologies

LGS delivers high quality services using established methodologies and toolsets for Web based business solutions

LGS is a truly open source development company and has developed many custom based open source applications and open source websites which are highly reliable, robust and secure.

LGS strongly believes in the value of open source software extensively. These widely-used open source technologies provide a stable, scalable and cost effective solution while allowing a rapid development. Our aim is to help small and medium enterprises to maximize their return on software investment by allowing them to cut cost.

LGS has vast experience and expertise in providing end-to-end solutions and has developed e-commerce portals, e-governance websites, community portals, online transaction systems etc., Proficiency in working with multiple databases like My SQL, MS SQL Server, Oracle and Db2.

LGS J2EE capabilities

Java has emerged as a leading development environment based on its platform-independent, multi-threaded, component-oriented architecture. Java offers outstanding scalability and extensibility across devices to meet changing business needs. JAVA integrates with most of the ERP applications to extend client business using 3-tier architecture.

- Technology architecture/ design
- New product development
- Core product engineering
- Product support
- Product maintenance

Microsoft Technologies

With our Qualified team of certified consultants with expertise in various Microsoft technologies, LGS offers as whole suite of solutions and services around Microsoft technologies.

LGS has certified professionals on the following technologies

- MS Share Point Server
- BizTalk Server
- Microsoft Dynamics (ERP)
- Microsoft Business Intelligence
- Microsoft Visual Studio .Net
- Microsoft SQL Server

LGS' ERP Practice

LGS evaluates enterprises and analyzes their information system requirements to design solutions that include the 'right' software and hardware. Our in-depth knowledge of ERP and pool of talented resources enable us to deliver cutting-edge solutions through our in-house SAP, Oracle, Microsoft Navision practices.

The salient features of our ERP Service offerings are:

- Proven methodology for off shoring ERP Application Maintenance and Support (AMS)
- Expertise in new-generation technologies and extended ERP solutions
- An industry leading onsite-offshore model additionally helps to lower the Total Cost of Ownership (TCO) of

SAP Practice centre

LGS' SAP practice offers the innovative, cost-effective and high-quality end to end solutions to our clients. Our SAP practice leverages on a team of experienced SAP consultants with vast experience and capabilities

Our Center of Excellence (CoE) approach leverages on our skilled SAP resources, industry knowledge, best practices, tools and methodologies to deliver unrivaled quality through a seamless onsite/offshore delivery model.

Oracle Practice centre

LGS is an Oracle partner and specializes in the implementation of Oracle Applications and Oracle Technology based solutions. We leverage in-house Oracle expertise to deliver high-value, cost-effective Oracle solutions both in Custom built arena and Enterprise Applications. We help organizations deliver enhanced services to customers to gain a competitive edge

LGS offers Complete Services for Oracle Technology and e-Business Suite Implementations, Migrations, Integrations, Customizations, and Upgrades to latest product releases. We provide quality service in implementing a wide range of solutions like Oracle e-Business Suite, PeopleSoft Enterprise, JD Edwards Enterpriseone, SIEBEL to name a few.

Microsoft Dynamics

Microsoft Dynamics delivers a compelling suite of technologies to help improve financial, customer relationship, and supply chain management. We build on the standard functionality in Microsoft Dynamics to deliver powerful industry solutions that meet industry-specific needs.

ISS Infrastructure Support Services

At LGS we offer IT Infrastructure Support Services which are flexible and agile for our global customers. LGS has in place, well-defined service level agreements (SLAs) which epitomize reliability and ensure consistency in performance.

We understand the critical role that IT infrastructure plays, thereby ensuring that your IT infrastructure is always responsive to your exclusive organizational requirements

SaaS @ LGS

Software-as-a-Service (SaaS) is changing the landscape of the enterprise applications market, which can help companies understand the current trends and future prospects and helps to maximize the returns of their enterprise application investments. SaaS eliminates the need for companies to perform installations, maintenance, support and delivers demand/subscription based software services.

ERP as SaaS

LGS' capabilities in ERP are further supported by SaaS practice which avoids the need for up-front costs, licensing fees, on-premise IT support infrastructure and helps in rapid, easy deployment. While this strategy has considerably reduced the operating costs of SMBs, LGS has also implemented SaaS solutions in large business enterprises to reap maximum benefits.

Business Intelligence

LGS' BI services help you bring together this data from disparate sources through multiple channels, transforming the data into intelligence and delivering it to the right people, at the right time, through the right channel.
